YOU, YOUR STUDIES & THE ENERGY TRANSITION

A Global Survey of Students in Tertiary Education

Today, the education and training landscape worldwide is confronted with an urgent need to prepare students for key roles in what is known as the energy transition. This global shift involves moving away from traditional, non-renewable energy sources, such as fossil fuels, towards a cleaner and more sustainable energy system primarily based on renewable sources. Every country must effectively manage this transition while ensuring social sustainability, requiring individuals with new or combined skill sets at all levels, from manual labour positions to top executives.

In light of this context, we are conducting a survey among students in universities and other tertiary education institutions worldwide to explore their perceptions of the energy transition and assess their interest in pursuing a career in the energy sector or other positions at the forefront of this transformation.

We cordially invite you to participate in this survey, which is being carried out by a consortium led by [empirica](#), a German research institute. This study has been commissioned by the [European Climate, Infrastructure, and Environment Executive Agency \(CINEA\)](#), an agency of the European Commission. Your input is invaluable in shaping the energy transition in Europe and beyond. Completing the survey should take approximately 5-8 minutes of your time. Rest assured that your responses will be treated with the utmost confidentiality, fully complying with EU data protection rules. The survey does not require you to provide any personal identification or disclose the organisation you are affiliated with.

Let's work together to drive positive change and create an environment that encourages the development of study programmes and job profiles that effectively address the challenges posed by climate change and the energy transition.

The survey is available (in English language only) at:
<https://ec.europa.eu/eusurvey/runner/EnergyTransition2023>.

The survey is conducted in the context of the "Study on Gender Balance in the R&I Field to Improve the Role of Women in the Energy Transition", a one-year research project carried out by a consortium led by empirica. The project has received funding from the European Climate, Infrastructure and Environment Executive Agency (CINEA) under Contract CINEA/2021/OP/0012.

The European Commission is not responsible for the content of questionnaires created using the EUSurvey service - it remains the sole responsibility of the form creator and manager. The use of EUSurvey service does not imply a recommendation or endorsement, by the European Commission, of the views expressed within them.
